HYPERBARIC OXYGEN THERAPY

Effective, non-invasive treatment that promotes brain and body healing

START NOW

EVIDENCED-BASED RECOVERY
WITH

Hyperbaric oxygen therapy helps stimulate your immune system and works to alleviate inflammation and pain, improving healing mechanisms in your body as a result. HBOT can be an effective treatment for various brain

HYPERBARIC OXYGEN THERAPY

injuries and mental health issues because it addresses the root cause of symptoms. Hyperbaric oxygen therapy is FDA-approved for 14 different conditions and has various applications for off-label conditions.

At All Points North, we partner with NexGen Hyperbaric to treat traumatic brain injuries, depression, and PTSD.

Little To No Side Effects

Most people experience minimal side effects with no downtime

Easy, Comfortable Treatment

Relax in an oxygen-filled tube while your body heals

Non-Invasive Treatment

No poking, prodding, or sedation required

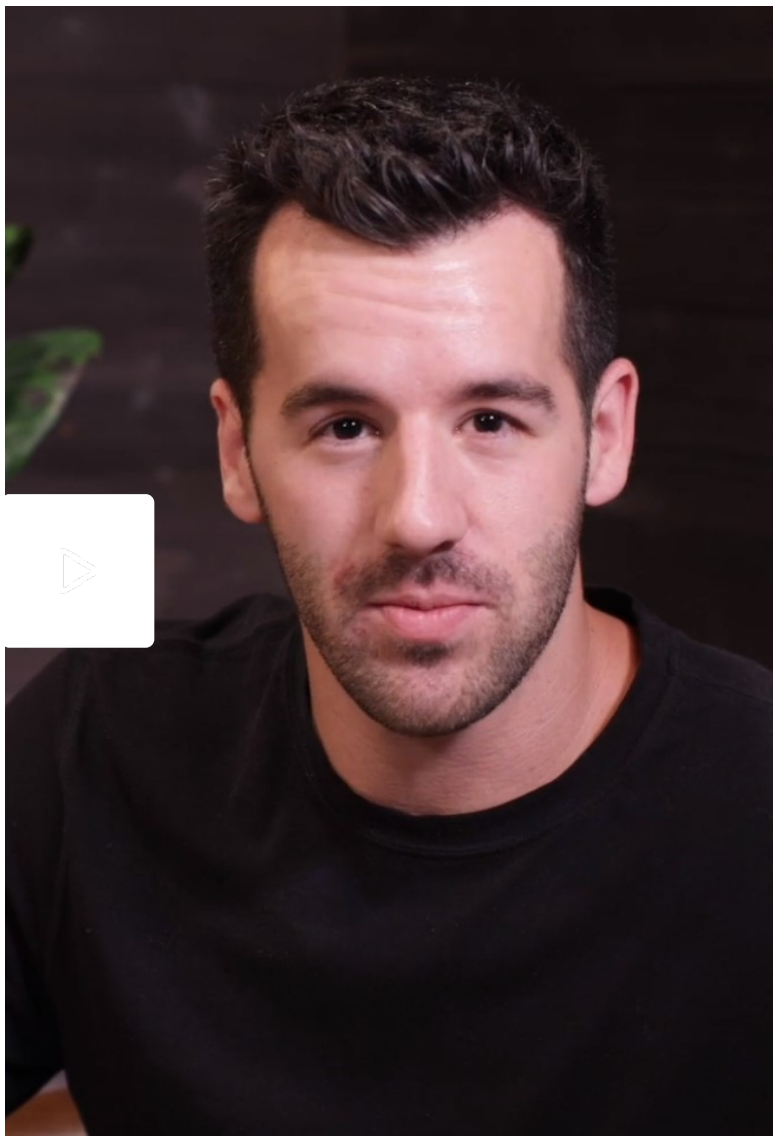

Evidence-Based

Research-backed, off-label relief for PTSD, depression, and anxiety

CHECK YOUR ELIGIBILITY

HOW DOES HBOT WORK?

Hyperbaric oxygen therapy can increase oxygen levels in the brain and throughout the rest of the body, which improves blood flow and oxygen circulation. This allows your cells to begin healing after injury or cell death. In an HBOT chamber, the patient breathes 100% oxygen that dissolves in plasma and nervous system fluids. Red blood cells carry more oxygen throughout the body, promoting healing and circulation in damaged tissue and reducing swelling and inflammation, which kills bacteria and encourages healthy blood flow.

WHAT DOES HBOT TREAT?

Hyperbaric oxygen therapy is FDA-approved to treat:

- Air and gas bubbles in blood vessels
- Anemia (severe anemia when blood transfusions cannot be used)
- Burns (severe and large burns treated at a specialized burn center)
- Carbon monoxide poisoning
- Crush injury
- Decompression sickness (diving risk)
- Gas gangrene

Hearing loss (complete hearing loss that occurs suddenly and without any known cause)
Infection of the skin and bone (severe)
Radiation injury
Skin graft flap at risk of tissue death
Vision loss (when sudden and painless in one eye due to blockage of blood flow)
Wounds (non-healing, diabetic foot ulcers)

HBOT is also used to treat off-label conditions, including:

Attention Deficit Hyperactivity Disorder (ADHD)
Anxiety
Arthritis (Rheumatoid, Osteoarthritis, Osteoarthrosis)
Bone Fractures
Depression
Drug Rehabilitation
Healthy Aging / Wellness
Injury Healing
Memory Loss
Migraine
Minimizing Surgical Complications
Post-Surgical Wound Healing
Systemic Shock
Traumatic Brain Injury

Outside of these specific conditions, HBOT has utility as a treatment for common, mild cognitive symptoms that we generally accept as part of life. HBOT can offer some relief for a wide variety of people that experience the following symptoms:

Brain fog
Memory issues
Chronic fatigue
Poor mood (unrelated to a disorder)
Inability to focus
Unexplained insomnia
Unusual hormonal changes
Withdrawal symptoms

A HYPERBARE OXYGEN THERAPY SUCCESS

Meet our former client at All Points for hyperbaric oxygen therapy. She had endocrine and hormonal issues and found a possible treatment option. Her initial goal was her physical recovery so that she could live an active lifestyle. Hyperbaric oxygen therapy increased her blood cell count, keeping her from needing a transfusion. Now, she has more energy and can get back to living a life she loves.

YOUR FULL CONTINUUM OF CARE

Wherever you are, you can start there. All Points North has built a full continuum of care to provide multiple “front doors” where you can jump into programming, whether you’re seeking treatment for the first time, tackling a relapse, or building recovery capital well into your journey.

APN offers drug and alcohol detox outside **Denver, CO**, and **Dallas/Fort Worth, Texas**. Residential treatment and partial hospitalization programs happen at **All Points North Lodge** in Edwards, CO. Virtual intensive outpatient programs, 1-on-1 therapy and psychiatry, and support groups are available through the **APN Connection** app. You can find integrative psychiatry and neurotechnology at our **Plus by APN** locations, and personal training and group fitness classes at **9x by APN**. Wherever you are, we’re with you.

ON WAY

your care record intact, eliminating
work with a different provider at each
stage. The longer you remain engaged
are, the higher your likelihood of
success.

GRAMS

WHAT TO EXPECT DURING HYPERBARIC OXYGEN THERAPY

HBOT sessions at the Lodge are designed to make you feel as comfortable as possible while being safe and effective. An HBOT tech from NexGen Hyperbarics and APN Lodge will oversee your session and answer any

questions you might have before, during, and after the treatment. The duration of HBOT sessions can vary, but the average time per session is about two hours.

HYPERBARIC OXYGEN THERAPY TREATMENT PROCESS

- 1.** The process starts with a free call or live chat. A member of our contact center team will gather your information and send it along to our HBOT team.
- 2.** You will receive a call from an HBOT team member to assess your story and discuss treatment options. We'll also run your insurance benefits, discuss payment, and take steps to see if you are qualified.
- 3.** When you come in for your first treatment, a director or tech will meet with you for about 60-90 minutes to go over details, assess you further, and discuss expectations.
- 4.** Prior to treatment, you'll change into scrubs for your comfort. After you slide into the transparent oxygen chamber, the HBOT technician will bring the air content to 100% oxygen at an elevated, comfortable, and controlled pressure.
- 5.** As you breathe in 100% oxygen, the amount of available oxygen in your blood increases. Extra oxygen dissolves in plasma, lymph, and central nervous system fluids.
- 6.** From there, the red blood cells carry the extra oxygen throughout your body. This supplies damaged tissues, non-healing wounds, and areas of low circulation with more oxygen to promote healing, reduce swelling, kill bacteria, and form new blood vessels.
- 7.** As a result, HBOT promotes optimal levels of oxygen needed for the body to more rapidly heal itself when faced with a variety of illnesses and injuries, including concussions, and mental health issues like anxiety, depression, and PTSD.
